

OVAKO

CLEAN STEEL **IN HIGH PERFORMANCES**

STEEL FOR WIND POWER APPLICATIONS

OVAKO KEEPS OUR WORLD IN MOTION

Ovako's steel cleanliness meets the performance demands of wind turbine applications such as gearboxes, transmissions, fasteners and bearings. Fatigue life is essential for low maintenance cost.

Wind power

Combined with modern technology, wind power – an ancient source of energy – offers a wide range of opportunities in the areas of capacity and sustainability.

Wind energy is available globally. Wind power is fuel free energy, which does not generate emissions into the air, water or ground. Almost all parts of a wind power plant can be recycled.

Ovako participates actively in furthering a more sustainable use of energy, by developing and supplying long special steel products for wind turbine structures, and by developing a more environmental friendly steel production.

Steel for high performance

Wind power is a demanding force. Our steel's key performances are fit to endure these harsh conditions. Ovako has developed steel cleanliness to meet the highest demands.

High performance wind turbines begin and end with Ovako. We support the long-term endurance of the wind turbine, producing energy efficiently – energy that we need in our own production.

Steel for extreme performances

- Endurance
- High performance
- Impact toughness
- Mechanical strength
- Corrosion resistance
- Machinability
- Tolerances
- Uniform and repeatable properties

Know how and services

- Capacity
- Timely deliveries
- Local supply

Generator

POWER TRAIN AND ROTATING ELEMENTS

Ovako has a wide range of high performance steel products, which means that we can offer the optimal product for most power train applications and rotating elements. Our steel is used when extra performance is demanded, typically for parts in gearboxes and transmissions.

We can offer our customers an edge when it comes to properties such as cleanliness, formability, machinability, high fatigue strength or hardenability, always maintaining the search for cost efficiency.

Our production systems are designed to meet the customers' requirements for product optimization. We also have the resources for manufacturing pre-components in various stages.

EXAMPLE OF APPLICATIONS

Electrical and hydraulic pitch drives		Slewing motion	Brakes
Cylinders:	Tubes Bars	Slewing rings: Rolled rings Bars Flat bars Profiled bars	Pistons: Tubes Bars
Pistons:	Bars Chrome plated bars		Cylinders: Tubes
Pumps:	Tubes Bars		
Electrical motor shafts:	Tubes Bars

STEEL FOR GUIDING AND MOTION CONTROL

Ovako has expert knowledge of the demands on hydraulic applications within the wind power industry. We offer special solutions even for the most difficult conditions.

We deliver special steel in the shape of bars and tubes for hydraulic pitch drives and components in the wind turbines.

Our chrome plated bars are used in pistons.

FASTENING AND ANCHORING

Wind turbine construction requires connecting elements and fasteners in order to anchor the wind turbine to the ground, to assemble the modules of the tower and to fasten the wings to the body.

Ovako supplies steel for the manufacturing of bolts, inserts and, in case of offshore wind turbines, anchoring chains.

In order to get the most out of wind energy, wind turbines are located in places with demanding weather conditions. Ovako can provide steel that withstands these conditions, including low temperatures.

OUR SIZE IS YOUR STRENGTH

Size matters – and focus too! As global steelmakers go, we are not a giant. But as a niche-oriented European player with 10 production sites focused on premium engineering steel, we have the resources and portfolio to meet your needs.

Today, you can choose from over 200 steel grades – from bar and tube to rings and pre-components. We also provide these in a wide range of formats that are near net shape, making machining easier and less costly.

Three major steelworks – at your service

Unlike distributors or steel companies with a single mill, we operate three major mills in the Nordic region, which means there is a strong likelihood that we'll have both the grade and capacity you require. More than this, since we control every batch of steel in a carefully monitored process, we can ensure batch-to-batch consistency. This further simplifies manufacturers' production processes and helps to reduce costs.

Seamless logistics and support

From grade selection to on-time delivery, our ambition is to make working with us easy. Our Steel Navigator, for example, helps you to select just the right grade based on steel designation, chemical composition or application. For machining, our M-Steel Calculator gives you data about recommended cutting conditions. Once you have ordered, our OvaTrack online tool lets you monitor your orders and process other information relating to your business activities.

Just the way you want it

Depending on your specific needs, our steel service centers in Sweden, Finland, Germany, United Kingdom and US can perform cutting and chamfering of different pre-components. The product is packed, marked and delivered according to your specifications. All the while, our technical customer support gives advice on product choice, adaptability to the customer's process and other technical information.

All of our service systems and interactive tools can be accessed through our web site at www.ovako.com

OVAKO HOFORS-HÄLLEFORS STEELWORKS, SWEDEN

Premium-quality steel products of high cleanliness and fatigue strength. Used primarily for components in bearings, diesel engines, oil & gas, mining and other special products. New ring mill for bearing steel and other demanding applications.

OVAKO TWENTE PRODUCTION, THE NETHERLANDS

Part of the Cromax division. Specialists in hard-chrome plated bars and tubes, mainly for hydraulic applications.

OVAKO MOLINELLA PRODUCTION, ITALY

Production of induction-hardened and hard-chrome plated bars for hydraulic cylinders.

OVAKO REDON PRODUCTION, FRANCE

Part of the Cromax division. Specialists in nickel-plated bars and tubes for challenging hydraulic applications.

**OVAKO SMEDJEBACKEN-BOXHOLM
STEELWORKS, SWEDEN**

Primarily alloyed engineering steel produced using advanced rolling to very tight tolerances. Products such as bolts and fasteners are used for transport, agriculture, rail and other demanding industries.

**OVAKO IMATRA
STEELWORKS, FINLAND**

Long steel products such as bar and rod for machining and forging. Consistent high quality designed for high-productivity cutting. Forged precision parts, including bolts and fasteners, for use in mining, offshore, shipping and automotive industry.

Ovako develops high-tech steel solutions for, and in cooperation with, its customers in the bearing, transport and manufacturing industries. Our steel makes our customers' end products more resilient and extends their useful life, ultimately resulting in smarter, more energy-efficient and more environmentally-friendly products.

Our production is based on recycled scrap and includes steel in the form of bar, tube, rings and pre-components. Ovako has around 2,700 employees in more than 30 countries and sales of approximately EUR 900 million. Ovako is a subsidiary of Sanyo Special Steel and a member of Nippon Steel Corporation group, the third-largest steel producer in the world with more than 100,000 employees globally and a revenue of approximately EUR 50 billion.
